1 Introduction

This document contains questions that participants will be asked by the investigator. These questions provide a roadmap of the application functionalities and investigators are free to pursue their own line of questioning regarding these functionalities. Throughout the application's testing, the investigator will time the duration spent on each section. Details such as timing justification, survey duration and participant information can be found in the Usability Report.

2 Creating an account

After participant verification, the application will be downloaded on the their device. The participant will be asked to launch the application and will proceed through each stage below.

Please click on 'create account' to be redirected to the account creation functionality. An invite code/PT license number should be provided to the participant.

Questions:

*If the participant selects the **NO** option for any **YES/NO** questions, please inquire further.*

1. Are the different elements on the screen appropriately positioned? **YES/NO**
2. Is the text font size sufficient for reading?
3. Can you clearly distinguish between the different colours on the screen?
4. Are the buttons appropriately

Are the buttons sized well?

Functionality use:

Rate the difficulty level for creating an account: low, medium, high

Were the visual elements arranged logically?

(if not, ask which one)

Do you have any comments/improvements for account creation?

Once the account has been created, the next step will be navigation to the home screen. Initially, the home screen will be empty.

3 Recording an exercise - patient ONLY

'The dashboard (?) will be populated once you have recorded and submitted the exercises.'

Was the 'record' symbol on the bottom tab helpful in deciphering what the specific button does?

'Once participant has clicked on it, it will take them to the record page'
First impression: Are the visual elements arranged logically?
Are the functions of each button clearly defined?
In your opinion, is the app effectively detecting the relevant body part?
Is the app displaying position modification instructions ('form not in frame') clearly and effectively?
Is the app detecting form discrepancies (angle too small etc) to a high level of accuracy?
Is each rep being detected correctly/accurately?
In your opinion, how accurate do you think the detection is?
Any comments/improvements for this?

4 Homepage

Are the different components of the page arranged logically? (yes/no). What could be fixeD?
Can you read the text on the screen without difficulty? (if they say no, ask why)

Are all the icons at the bottom accurately descriptive?
Are all the icons at the bottom large enough?
Do the icons navigate to their correct page?

5 Exercise page

Are the different components of the page arranged logically? (yes/no). What could be fixeD?

Can you read the text on the screen without difficulty? (if they say no, ask why)

ask them to click on the exercise; it will nevigatE to the example video and instructions
Can you read the text on this screen without difficulty?

Is this page fulfilling its targeted task?

Are the instructions descriptive enough?
ask about whether there is too much tech jargon

6 Viewing stats

7 exercise mods PT only

How easy is it to mod patient ex?

How easy is it to comment?

Are the comments displayed in a logical manner?

Is viewing patient stats presented in a logical way?

8 Uncategorized questions

Are the ex instructions clear?

Is the video below ex instructions clear?
