Note: this document is not the final version. It is merely an additional aid for the developers.

1 Introduction

Evaluation of quantitative and qualitative aspects of the Physio Companion app is done through a usability study. This document outlines the testing methodology and concludes with the resulting findings.

The goals of the study are:

- Assess the ease of use of the app across a diverse demographic
- User understanding of the terminology within the app
- User perception of the flow and navigation within the app
- Identification of any friction points
- Feedback on additional and beneficial features within the app

2 Techniques

3 Demographics

The study participants' details are outlined below:

Participant 1

- Age
- Gender
- Occupation
- Level of digital literacy¹

Participant 2

- Age
- Gender
- Occupation
- Level of digital literacy¹

Participant 3

- Age

- Gender
- Occupation
- Level of digital literacy¹

Participant 4

- Age
- Gender
- Occupation
- Level of digital literacy¹

Participant 5

- Age
- Gender
- Occupation
- Level of digital literacy¹

¹ *Note: This measure pertains to smartphone usage. It is divided into low, medium, or high expertise indicating how comfortable the user is operating the device.*

4 To be asked during use of app

5 To be asked after use of app
