Note: this document is not the final version. It is merely an additional aid for the developers.

1 Introduction

Evaluation of qualitative aspects of the Physio Companion app is done through a usability study. The project timeline and resources limit the participant pool size, and as a result, this study does not provide any quantitative insights. This document outlines the testing methodology and concludes with the resulting findings.

The goals of the study are:

- Assess the ease of use of the app across a diverse demographic
- User understanding of the terminology within the app
- User perception of the flow and navigation within the app
- Identification of any friction points
- Feedback on additional and beneficial features within the app

2 Techniques

The techniques used to conduct these tests were a mixture of both in-person and remote moderated testing. The participants were shown how to install the app on their smartphone. After successful installation of the program, the facilitator guides the participant on the app's use. An additional individual will be playing a role as an observer recording the user's behaviour. (see appendix from a preliminary set of questions and prompts?). At the end of the study, participants are given a survey to complete (see appendix).

3 Demographics

The participant pool comprises of individuals of varying ages, genders and occupations, which ensures coverage of a broad target user base.

Participant 1

- Age
- Gender
- Occupation
- Level of digital literacy¹

Participant 2

- Age
- Gender
- Occupation
- Level of digital literacy¹

Participant 3

- Age
- Gender
- Occupation
- Level of digital literacy¹

Participant 4

- Age
- Gender
- Occupation
- Level of digital literacy¹

Participant 5

- Age
- Gender
- Occupation
- Level of digital literacy¹

¹ *Note: This measure pertains to smartphone usage. It is divided into low, medium, or high expertise indicating how comfortable the user is operating the device.*

4 To be asked during use of app

5 To be asked after use of app
